Not only an eyeball but photo documentation of the system. We also need to try and get driller's logs of course and etc.....

We have to remember to get an eyeball on the well when we get to the residents....something that never occurred to me - hey, I am a biologist! - but with the fecal coliform issues in some wells it makes sense.

At the well hopefully you'll be able to observe one or more casing strings and/or grout at the surface

We can add this but I can pretty much guarantee that few (if any) will know that information. Even the residents that may have a drillers report, most of that information is missing. The only info that is available (less than 10%) of the time is the depth that the pump is set.

Subject: Re: update: Dimock information

To add to the questionnaire after the driller's name:

Depth of surface casing
Cement on surface casing
Then length/depth of screen;
Depth of pump in relation to total depth

From what I remember these wells range from abot 30 feet deep to over 500 feet deep. Mike's review of the geology in

that valley indicates there is basically about 200 feet of alluvial till (sand and gravel) with bedrock below so some of these wells may be in the till and others in the bedrock.

If the contractor doesn't have a water level meter we do and water levels should be taken before any pumping and sampling gets started

Subject: update: Dimock information

Just wanted to let folks know where we are: Mick and I spoke to Shawn a little while ago - he is focusing on the document "Dimock - Plan of Action" and the draft message to residents below in Mick's e-mail - and will be sending to HQ revised versions.

We will be working on modifying the fact sheet and Outreach strategy tomorrow. - any comments, please provide to Helen Duteau

In addition we need to work on the script for folks who are going out to meet with the residents and the information needed on the wells... below is the earlier messaging I sent out :

[attachment "Messaging to Residents.docx" deleted by KarenD Johnson/R3/USEPA/US]

and a draft well survey:

[attachment "Dimock well survey.doc" deleted by KarenD Johnson/R3/USEPA/US] - please get any comments on these documents as well asap

The plan at this moment is to speak to PADEP first followed by Cabot and message to residents with intent to get out Thursday and Friday to meet with the 2 w/high organics and 19 homes as priority followed by others we find in area....

Let me know if you have any questions

Ron

Subject: Re: Dimock information

The attached is a draft message to residents for release in conjunction with contacts tomorrow to PADEP and Cabot. This would also serve as the media statement.

Subject: Dimock information

Attached are initial drafts of the roll-out plan and fact sheet for residents in addition a plan of action. These still need some work, but they are a good starting point.
